

BEST 40H Spindle & Lever Product Update

STANLEY Security Sales Professionals:

The STANLEY Security Products Engineering team is releasing an updated spindle and lever for the BEST 40H series mortise locks. As part of the ongoing product improvements process, additional updates were made to the BEST 40H spindle and lever to enhance the attack resistance of the lock. The spindle is now made of a higher strength alloy material and the positioning of the lever pinning holes has changed.

Next Steps: This will be a rolling change with the new spindles & levers to begin shipping the end of December 2014. With this being an ongoing process, it will be important for customers to use the picture and descriptions below to identify exactly what they need to replace. The old spindles and levers are not compatible with the newly enhanced spindle and lever. Please see below for the new spindle and lever part numbers as well as a description of the differences between the two.

Please direct any questions concerning this product update to the Technical Support Team at 1-800-392-5209 (option 1, option 2) or visit the [Knowledge Base](#) to acquire additional information.

This as well as all other STANLEY Security marketing communications can be found at:
