

Maintenance of residential hinges

As a general rule, hinges are to be lubricated every six months. Use Shell Darina #2 or equivalent heavy bearing grease*. Wipe excess grease and dirt from hinge. Use a soft damp cloth free of any chemicals that would harm the protective lacquer coating.

This is a general procedure and it should be recognized that high use of door openings or exterior applications may demand more frequent servicing.

* To lubricate hinges, extract pins and wipe or dip with grease. Reinsert pin. Grease will work into load bearing surfaces. Wipe excess grease and dirt from hinge.
